Question 1

Correct

Marked out of 3.00

Flag question

Write a program to read two integer values and print true if both the numbers end with the same digit, otherwise print false. Example: If 698 and 768 are given, program should print true as they both end with 8. Sample Input 1 25 53 Sample Output 1 false
Sample Input 2 27 77 Sample Output 2 true

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main ()
3 {
4     int a,b;
5     scanf("%d %d",&a,&b);
6     if(a!=0 && b!=0)
7     {
8         a=a%10;
9         b=b%10;
10    }
11    else
12    {
13        printf("false");
14    }
15    if(a==b)
16    {
17        printf("true");
18    }
19    else
```

```
23 }  
24  
25  
26  
27  
28  
29  
30  
31
```

	Input	Expected	Got	
✓	25 53	false	false	✓
✓	27 77	true	true	✓

Question **2**

Correct

Marked out of 5.00

🚩 [Flag question](#)

Objective

In this challenge, we're getting started with conditional statements.

Task

Given an integer, ***n***, perform the following conditional actions:

- If ***n*** is odd, print Weird

- If ***n*** is even and greater than **20**, print ***Not Weird***

Complete the stub code provided in your editor to print whether or not ***n*** is weird.

Input Format

A single line containing a positive integer, ***n***.

Constraints

- $1 \leq n \leq 100$

Output Format

Print Weird if the number is weird; otherwise, print Not Weird.

Sample Input 0

3

Sample Output 0

Weird

24

Sample Output 1

Not Weird

Explanation*Sample Case 0: $n = 3$* n is odd and odd numbers are weird, so we print **Weird**.*Sample Case 1: $n = 24$* $n > 20$ and n is even, so it isn't weird. Thus, we print **Not Weird**.**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int n;
5     scanf("%d",&n);
6     if(n%2==0)
7     {
8         if (n>=2 && n<=5)
9         {
10             printf("Not Weird");
11         }
12         else if(n>=6 && n<=20)
13         {
14             printf("Weird");
15         }
16     }
```

```
19         }
20     }
21     else
22     {
23         printf("Weird");
24     }
25 }
```

	Input	Expected	Got	
✓	3	Weird	Weird	✓
✓	24	Not Weird	Not Weird	✓

Question 3

Correct

Marked out of 7.00

Flag question

Three numbers form a Pythagorean triple if the sum of squares of two numbers is equal to the square of the third. For example, 3, 5 and 4 form a Pythagorean triple, since $3^2 + 4^2 = 25 = 5^2$. You are given three integers, a, b, and c. They need not be given in increasing order. If they form a Pythagorean triple, then print "yes", otherwise, print "no". Please note that the output message is in small letters. Sample Input 1 3 5 4 Sample Output 1 yes Sample Input 2 5 8 2 Sample Output 2 no

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int a,b,c;
5     scanf("%d %d %d",&a,&b,&c);
6     if(a>b && a>c)
7     {
8         b=b*b;
```

```
12  {
13      printf("yes");
14  }
15  else
16  {
17      printf("no");
18  }
19  }
20  else if(b>a && b>c)
21  {
22      a=a*a;
23      c=c*c;
24      b=b*b;
25      if(b==a+c)
26      {
27          printf("yes");
28      }
29      else
30      {
31          printf("no");
32      }
33  }
34  else
35  {
36      a=a*a;
37      b=b*b;
38      c=c*c;
39      if(c==a+b)
40      {
41          printf("yes");
42      }
43      else
44      {
45          printf("no");
46      }
47  }
48
49 }
```
